

Roles and permissions

Roles and permissions are used to give users the correct access to various system functionality relating to their business roles. A user may have multiple roles. ActiveServer comes with pre-defined user roles:

- **System admin** - for managing the technical upkeep for the instance, including deployment and licensing, directory server connection management, system settings management plus monitoring system notifications.
 - **Page access:** *Directory servers, Deployment, Audit logs, Settings, About, Profile, System notifications.*
- **User admin** - for managing users for the instance, including assigning roles. This role is able to see all merchants in the system to enable it to assign a merchant to a single scope user. There must always be one user with this role.
 - **Page access:** *Merchants, User Management.*
- **Business admin** - for managing the business processes for **all** merchants on the instance, including viewing dashboard statistics, managing merchant functions and viewing transaction history.
 - **Page access:** *Dashboard, Merchants, Transactions, Profile.*
- **Merchant admin** - for managing the business processes for a **single** merchant on the instance, including viewing dashboard statistics, managing merchant details and viewing transaction history.
 - **Page access:** *Dashboard, Merchants, Transactions, Profile.*
- **Merchant** - for users who require read only access to a **single** merchant on the instance, including viewing dashboard statistics, viewing merchant details and viewing transaction history.
 - **Page access:** *Dashboard, Merchants, Transactions, Profile.*
- **Certificate Manager** - for users who will manage the downloaded certificates.
 - **Page access:** *Certificate Monitor.*

Permission scope

Each user role has a level of scope attached to allow a **User admin** user to define the correct level of access to entities within the system.

Merchant scope

In relation to **Merchants**, scope indicates whether the user will be able to access **all** merchants and their information (e.g. statistics, details, transactions), or just allow access to a **single** merchant's information:

- **All scope** - The **Business admin** role has authority over **all** merchants. This allows them to select **all merchants** when viewing dashboard statistics, search/edit/create/delete all merchants and view transactions for all merchants in the system. The **User admin** has access to viewing merchant details for the purposes of assigning merchants to single scope users.
- **Single scope** - The **Merchant admin** and **Merchant** roles have authority over a **single** merchant only. After a merchant is assigned to their profile, they can access **only** that merchant's dashboard statistics, merchant details and transactions.
- **No scope** - The **System admin** role does not have any permissions relating to managing merchants, and therefore is not able to access any pages with merchant functionality.

This separation of duties allows clients managing multiple merchants in a single system, such as Payment Service Providers, to give granular control to individual merchants if required.

Important

If a user is assigned roles that have both **All** and **Single** scope, the **All** scope will take precedence.

Assigning merchants

If a user has **Single** scope level access in relation to merchants, a **User admin** can [assign](#) them an already created merchant to manage.

If the user already has a merchant assigned to them, this can be overwritten in their profile but they cannot have more than merchant at a time.

Permission list table

The following table provides a detailed view of the specific permissions granted to the user roles. The **Scope** column indicates permissions that have a [scope](#) attached to it where appropriate.

User Note

Through this document you will see these **User Note** boxes, which indicate what features are available to specific user roles.
